

FundWare Corridor

Kintera FundWare **Corridor** is literally your gateway to accessing General Ledger, Project/Grant, Accounts Payable, and Payroll data files.

Corridor is one of the most powerful tools in the FundWare suite of products. This quiet giant is virtually invisible and allows you to use a variety of sophisticated spreadsheets, report writers, and application builders with FundWare data.

FundWare Corridor is ideal for sophisticated outcome measurement reporting.

FEATURE HIGHLIGHTS:

Powerful Reporting Applications

Utilizing Windows applications such as Microsoft® Access, Microsoft® Excel, and Seagate's Crystal Reports®, FundWare Corridor gives you the power to retrieve various combinations of data for reports and graphs in the format you need. Access real-time information and utilize an extensive online reference guide and online help.

Comprehensive Data Dictionary

Corridor provides descriptive information for the data housed in the FundWare database. The data dictionary lists all of the tables, columns, and relationships between tables through what are called "keys." The FundWare Corridor Data Dictionary is the interactive application through which you have access to an extensive online reference guide with data dictionary information.

ODBC Compliant

Designed as an Open Data Base Connectivity (ODBC) compliant application, FundWare Corridor is a suite of applications, system software, utilities, and files designed to provide an ODBC interface to FundWare data files. In addition, Corridor provides a full data dictionary with a graphical view of the data relationships and field contents. It allows you to bridge your financial information with your case management system, donor tracking system, or other third-party applications.
