

FundWare Connect

## FEATURE HIGHLIGHTS:

### Seamless Import of Third-Party Data

Reformat and import third-party data seamlessly into FundWare, including summarized donor management transactions, customized receivable interface, external payroll import, and other financial transactions generated by outside systems.

### Easy Transaction Account Conversion

Perform multi-step processing through easily defined mapping tables, which allow transaction account conversions (e.g., old-to-new) with logical expression builders and file testing.

### Automatic Data Conversion

Convert data automatically and import into FundWare (e.g., legacy-system transactions, or historical vendor information).

The FundWare **Connect** data integration module allows effortless data import into the FundWare database from external applications. It is especially valuable for initial legacy-data conversion to the FundWare system.

FundWare Connect is based on Microsoft's® Access 2000 platform and is independent of the FundWare environment. This means that FundWare Connect does not access FundWare data files directly, but instead uses FundWare import routines to perform the business rules and error checking prior to importing data, thus ensuring the integrity of your accounting system.
